## MULTI-LAYER STEEL CABLE FOR TIRE CROWN REINFORCEMENT

## **ABSTRACT**

A multi-layer cable having an unsaturated outer layer, usable as a reinforcing element for a crown reinforcement of a tire, comprising a core of diameter  $d_0$  surrounded by an intermediate layer (C1) of six or seven wires (N = 6 or 7) of diameter  $d_1$  wound together in a helix at a pitch  $p_1$ , this layer C1 itself being surrounded by an outer layer (C2) of P wires of diameter  $d_2$  wound together in a helix at a pitch  $p_2$ , P being less by 1 to 3 than the maximum number  $P_{max}$  of wires which can be wound in one layer about the layer C1, this cable having the following characteristics ( $d_0$ ,  $d_1$ ,  $d_2$ ,  $d_3$ ,  $d_4$ ,  $d_4$ ,  $d_5$ ,  $d_4$ ,  $d_4$ ,  $d_4$ ,  $d_5$ ,  $d_4$ ,  $d_4$ ,  $d_5$ ,  $d_4$ ,  $d_4$ ,  $d_4$ ,  $d_5$ ,  $d_4$ ,  $d_4$ ,  $d_5$ ,  $d_4$ ,  $d_5$ ,  $d_4$ ,  $d_5$ ,  $d_7$ ,  $d_8$ ,  $d_9$ 

```
- (i)
              0.28 \le d_0 < 0.50;
- (ii)
              0.25 \le d_1 < 0.40;
- (iii)
              0.25 \le d_2 < 0.40;

The invention furthermore relates to the articles or semi-finished products made of plastics material and/or rubber which are reinforced by such a multi-layer cable, in particular to radial tires and their crown reinforcement plies.
